

SINCE **1970**

45 Years

DHI Global Medical Group has been dedicated solely to the education, research, diagnosis and treatment of hair and scalp disorders for 45 years.

[www.dhiglobal.com](http://www.dhiglobal.com)

# History in Brief

When I founded the DHI Medical Group in 1970, the number of clinics that specialized in the treatment of Alopecia and hair loss could be counted on one hand.

Today there are tens of thousands and the number is growing by the hundreds every year. Many of these clinics have a short life span and fail for various reasons.

Excellence is difficult to maintain. At DHI Medical Group we have survived the test of time, while growing larger and stronger. We have a worldwide reputation second to none. This is inspired by our vision, mission and values.

K. P. Giotis  
DHI Medical Group Founder & President

# 45 Years

## Committed to Our Vision, Mission & Values

For 45 years DHI Global Medical Group has been committed to its vision to change the world of hair restoration from the inside out, through research, education and innovative treatments.

DHI Global Medical Group has been dedicated to its mission to contribute to the health and well-being of all patients who suffer from hair and scalp disorders, following our 7 values: **innovation, credibility, transparency, effectiveness, care** and **belief in science**.

# Total Care System

DHI Medical Group has set up a Total Care System for the treatment of any pattern of male and female hair loss that lasts for a lifetime.

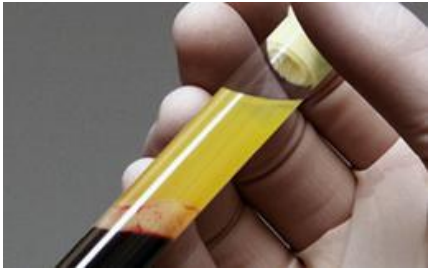

Direct Hair Implantation

Scalp MicroPigmentation

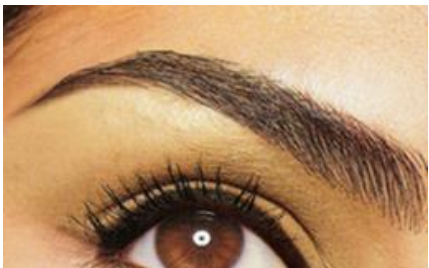

PRP Products

DHI PRP

Hair Prosthetics

Eyebrows Restoration

Beard Restoration

Body Hair Restoration

# Direct Hair Implantation

The simplest, safest, most advanced hair transplant yet

DHI Medical Group developed DHI Direct Hair Implantation to provide natural results, 100% safety and maximum hair growth for a lifetime.

This treatment, performed only by DHI certified doctors, is available for male and female patients.

Thanks to the simplicity of the procedure it is now possible to even grow new hair in the eyebrows, beard or any part of the body.

## Extract

Healthy hair follicles that are genetically resistant to balding are extracted from the donor area – this is usually the lower back of the head that is rarely affected by baldness – using a specifically designed, disposable tool with a diameter of 1mm or less.

## Collect

Extracted hair follicles are collected and kept at a specific temperature and in a solution that enhances their development after placement. Unlike with traditional procedures, we do not process or divide hair follicles, avoiding the risk of damaging hairs through unnecessary cutting and prolonged handling outside the body.

## Implant

Hair follicles are implanted one by one in the recipient area using a patented tool, the DHI Implanter, again with a diameter of 1mm or less. Unlike with other techniques, there is no need for reception incisions or holes on the recipient area. This provides full control of depth, direction and angle of placement of each graft, which is critical for achieving maximum growth of the implanted hair. The implanted hairs continue to grow throughout a person's lifetime and do not fall out.

# DHI Scalp MicroPigmentation

## Instant Hair Density

The DHI Scalp Micropigmentation (Direct MPG) is a new and promising hair restoration method for the increased hair loss and sparse hair.

Direct MPG is the artful application of small dots or lines between existing hairs on the scalp across the region of thinning to present the illusion of a higher density. On a totally bald scalp MPG even offers a natural shaven look.

**Instant Density**

**Shaven Look**

# DHI PRP

## Promote Hair Growth

DHI PRP (Platelet Rich Plasma) is the new, revolutionary treatment for male and female hair loss.

DHI PRP stimulates the scalp and encourages hair growth by using patient's own plasma. The plasma fortifies and sustains current hair and can even reactivate dormant follicles.

PRP can be coupled with any hair transplant procedure, helping implanted hair follicles prosper. Additionally, it will reduce the formation of scabs, trauma, inflammation and redness; and help the donor areas dermis and epidermis heal faster.

# DHI Products

## Hair Growth Shampoos & Lotions

The DHI Global Medical Group has created a new line of hair growth shampoos and lotions to protect against hair loss.

These natural, Mediterranean products delivery nutritional balance for strong and healthy hair.

They are ideal for men and women and specially designed for each hair type (normal, greasy and dry). The range includes a soothing lotion and extra mild shampoo, formulated for irritated skin, for example after hair transplant.

# DHI Unique Diagnostic System

DHI research shows that 67.3% (about 3 out of 4) of men and women suffering from hair loss opted for treatment without a proper prior medical diagnosis.

Hair loss might appear with different patterns and because of several different causes. In order to help clear the confusion and to offer a complete medical diagnosis for all types of alopecia, for both male and female hair loss, DHI Medical Group invented the Unique Diagnostic System for Alopecia (UDSA)

UDSA examines each specific case individually, assessing psychological aspects, dermatological examination, mathematical aspects and the DHI alopecia test, before determining the appropriate treatment plan.

# The largest medical team in the world

DHI Global Medical Group with 56 clinics worldwide has the largest and most experienced team which consists of 45 doctors, 55 nurses and more than 70 executives and consultants.

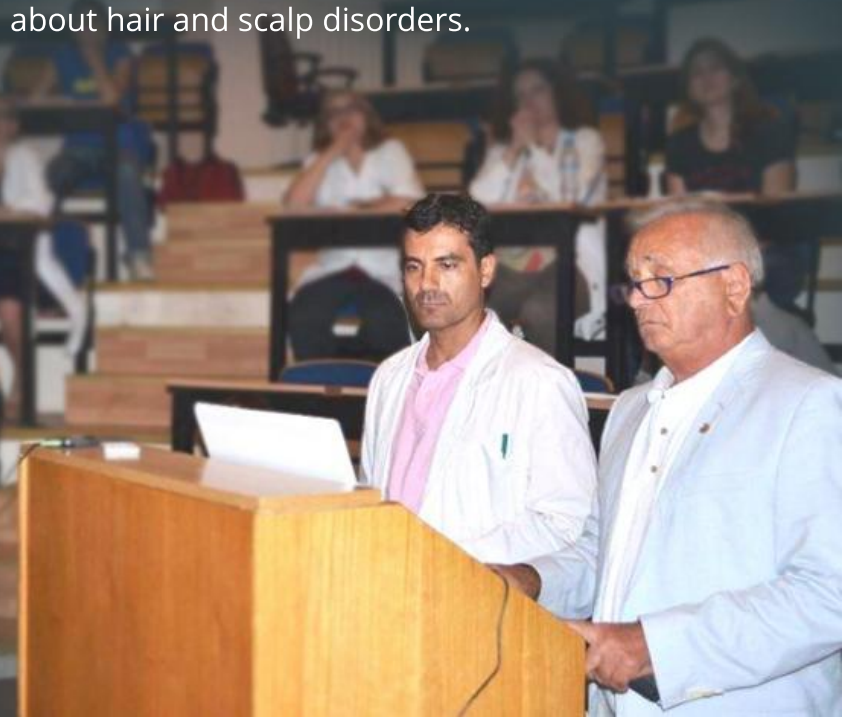

# DHI Training Academy

The one and only hair restoration academy in the world

One of the main problems in our industry is the lack of proper education for doctors and other health care providers. Medical schools simply do not teach much about hair and scalp disorders. They offer little help and education to those interested in hair loss as a specialty or sub-specialty.

Doctors wishing to learn this specialty often attend short seminars. Afterwards they simply set up a practice and learn on often unsuspecting patients. This is not a formula for success. In fact, it is just the opposite. It takes more than a few days at a seminar to gain the knowledge and experience required to have a successful hair restoration practice.

In order to help deal with this crucial problem, we established the London Hair Restoration Training Academy Limited in 2012. Since then, we have trained over 150 medical specialists and we are now able to make our treatment techniques available across the globe.

# Quality Standardization

The Academy developed strict educational protocols and SOPs (Standard Operating Procedures) and has now trained doctors, nurses and clinic managers from around the world.

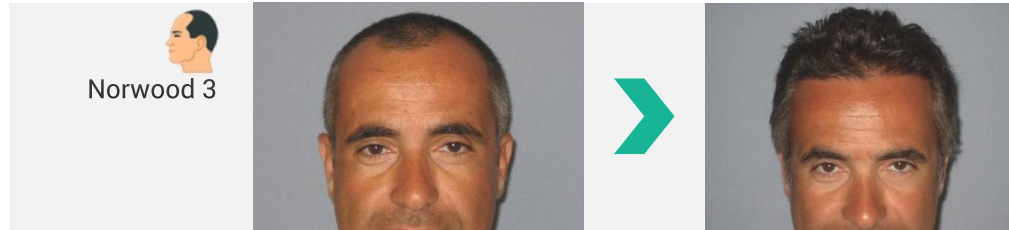

We are proud that our protocols are now recognized by several national public health authorities, ISO and the World Health Academy. Our techniques are taught at public universities across Europe.

In the near future we hope to establish the first university that will offer full time courses for the diagnosis and treatment of alopecia and hair and scalp disorders for doctors, nurses and clinic managers.

Every year worldwide experts gather in Sounio, Greece under the magnificent temple of Poseidon where they present the latest achievements, debate and discuss the future innovations in hair restoration.
